

1 ABSTRACT OF THE DISCLOSURE

2 A surround is for use in an electron-dynamic acoustical
3 transducer. The electron-dynamic acoustical transducer
4 includes a frame, a diaphragm and a voice coil. The
5 surround includes a single, large, semi-circular corrugation
6 that is constructed from compressed neoprene foam rubber and
7 secured to the frame by the surround. The surround has a
8 plurality of radially distributed, relatively less-
9 compressed areas.
